DATE MAILED: 05/19/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	Applicant(s)
Office Action Summary	10/671,493	SAKAMOTO ET AL.
	Examiner	Art Unit
	Seung H. Lee	2876
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).		
Status		
1) Responsive to communication(s) filed on	_•	
, , , , , , , , , , , , , , , , , , , ,	action is non-final.	
3) Since this application is in condition for allowance except for formal matters, prosecution as to the ments is		
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.		
Disposition of Claims		
4) Claim(s) 1-13 is/are pending in the application.		
4a) Of the above claim(s) is/are withdrawn from consideration.		
5) Claim(s) is/are allowed.		
6)⊠ Claim(s) <u>1,2,4,6,7 and 9</u> is/are rejected.		
7)⊠ Claim(s) <u>3,5,8 and 10-13</u> is/are objected to.		
8) Claim(s) are subject to restriction and/or election requirement.		
Application Papers		
9) The specification is objected to by the Examiner.		
10)⊠ The drawing(s) filed on <u>29 September 2003</u> is/are: a)⊠ accepted or b)□ objected to by the Examiner.		
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).		
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).		
11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.		
Priority under 35 U.S.C. § 119

DETAILED ACTION

Claim Objections

1. Claim 8 is objected to because of the following informalities:

Re claim 8, line 8, Please substitute "it was" with -the adapter was--.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 2, 4, 6, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gochnour et al. (US 6,865,086)(hereinafter referred to as 'Gochnour') in view of Ito (US 2001/0006902).

Gochnour teaches a standard-sized memory card (100) comprising an extension member (140) serving as an adaptor and a memory card (110) wherein the extension member is removeably connected to recesses (120 and 130) of the memory card forming a particular card type or shape that the particular card type serves as a designated particular services wherein the particular shaped card having a memory unit (not shown) that is only accessible via a contacts (118) and corresponding contacts of a

Application/Control Number: 10/671,493

Art Unit: 2876

read/write device according to the shape of the card (e.g., a MultiMedia card (MMC) is only usable with the MMC read/write device) (see figs. 1-14; col. 5, line 45-col. 7, line 7).

However, Gochnour fails to particularly teach or fairly suggest that the detection unit to detect the present of the extension member.

Ito teaches that a memory card (10e) is connected to an expansion module (50) via a connection (54), the memory card comprises a LSI (51) having a SD-BT interface (51c) wherein the SD-BT interface serves as a detection unit to detect the contact or present of the expansion module through the connection for executing a radio communication functions such as a Bluetooth serving as a designated services, the expansion module also comprises a LSI (56) for sending/transmitting information to the external device for selected service (e.g., transmitting information using Bluetooth protocol), the PIN code stored in the extension module is compared with PIN code for destination device or external device (see figs. 2, 3, 8; paragraphs 0037-0042; paragraphs 0074-0082).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Ito to the teachings of Gochnour in order to provide a wireless communication system wherein data/information stored in the memory card such as SD memory card can be assessed via the RF circuits in which the RD circuits can be detected by the SD-BT interface of the memory card for initiating the wireless communication system. Moreover, such modification would provide an improved security by allowing communication with only those of pre-registered destination device.

4. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gochnour as modified by Ito as applied to claim 1 above, and further in view of Mos et al. (US 5,770,846)(hereinafter referred to as 'Mos').

The teachings of Gochnour/Ito have been discussed above.

Although, Gochnour and Ito teach that the memory card is comprise a card member and extension member wherein the extension member can be inserted/removed from the card member, they fail to particular teach that the CPU or LSI receives a detection signal from the detection unit only for a specified time interval.

However, Mos teaches a processing device (404) such as a microprocessor performing transaction detection at regular intervals (see figs. 4 and 7; col. 7, line 53-col. 8, line 48).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Mos to the teachings of Gochnour/Ito in order to provide an improved communication system by checking incoming signal regularly after the extension member or the RF module is connected to the main card for further processing of data, that is, the processing device is checking the incoming data constantly when the RF module is connected therewith.

Allowable Subject Matter

- 5. Claims 3, 5, 8, and 10-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter:

Although, Gochnour and Ito teach that the memory card is comprise a card member and extension member wherein the extension member can be inserted/removed from the card member for reducing size of the card. However, Gochnour and Ito taken alone or in combination with other references fails to particularly teach that the memory card comprises a service ID and a card ID that uniquely identifies a service or memory card that is stored in the adapter and the memory unit wherein the CPU or LSI acquires and compares the service ID or the card ID from the adapter and memory unit for providing service when the service ID or the card ID match, the main card body comprises an external-device-detection unit for detecting the external device wherein the adapter comprises a control unit to stop the information service when the adapter detects the card is connected to the external device, and the adapter has a concave-shaped or convex-shape adapter-connection contacts and the main-body-connection unit has convex-shaped or concave-shaped main-bodyconnection that fit with the concave-shaped or convex-shaped adapter-connection contacts wherein the detection unit sends a conduction signal to the CPU or LSI by closing contact points between the adapter-connection contacts and main-bodyApplication/Control Number: 10/671,493 Page 6

Art Unit: 2876

connection contacts wherein the adapter is connected to the main card body as set forth in the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kadinaga (US 6,768,645) discloses an IC card and an IC card adaptor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Seung H. Lee whose telephone number is (571) 272-2401. The examiner can normally be reached on Monday-Friday, 7:30 AM- 4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G. Lee can be reached on (571) 272-2398. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
